Delta built the solar system for the National Stadium holding the 2009 World Games.

Delta Electronics Group

Delta was founded in 1971 and has been the global leader in switching power supply solutions since 2002 and DC brushless fans since 2006.

Delta offers the most energy efficient power products in the industry, including switching power supplies with efficiency over 90%, telecom power with up to 97.5%, and PV inverters with up to 98.8% efficiency. We have also developed the world's first server power supply certified as 80 Plus Titanium with over 96% efficiency. We commonly invest 6% to 7% of our annual sales revenues in R&D and have worldwide R&D facilities in Taiwan, China, Europe, India, Japan, Singapore, Thailand, and the U.S.

Delta is a frequent recipient of international awards and related recognition for innovation, design, and corporate social responsibility. Since 2011, Delta has been selected each year for the prestigious Dow Jones Sustainability™ World Index (DJSI World). In 2015 we were also included in the DJSI Emerging Markets Index and ranked first among 45 leading companies in the Electronic Equipment, Instrument and Component sector.

Delta was also included in to the Climate Disclosure Leadership Index (CDLI) of the 2015 CDP (formerly the Carbon Disclosure Project). Delta continues its dedication to developing technologies and solutions global warming and ensures a sustainable future for mankind.

Why Drives Matter

Drives can save more than 40% of the electricity consumption of their motors and reduce related CO₂ emissions. Industry accounts for one-third of the world's electricity consumption and electric motors consume more than 65% of industrial electricity [1]. Power consumption can be reduced significantly if drives are used for the speed regulation of the motors. The impact on the electric grid on the startup current is reduced. The wear of the motor and other machinery are mitigated and the maintenance fee is lowered. A high-performance, reliable drive such as Delta's MVD1000 medium voltage drive can provide an enterprise with substantial energy savings as well as increased productivity of the equipment.

[1] "Energy Efficient Motor Driven Systems," European Copper Institute, Fraunholfer-ISI, KU Leuven and University of Coimbra (April 2004)

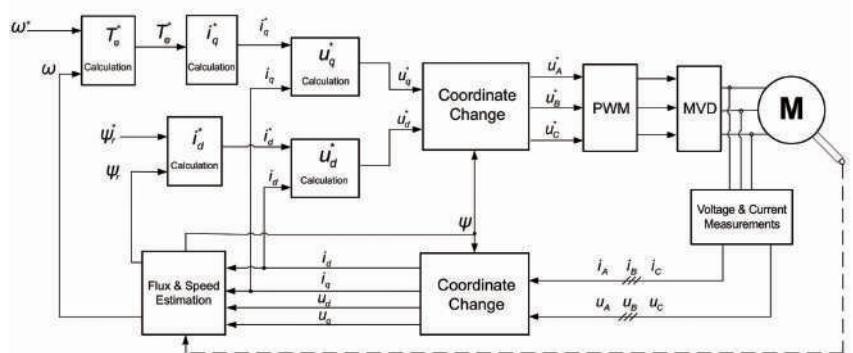

Delta MVD1000/MVD2000 Series

Delta Electronics's medium voltage drive is developed with cutting-edge technologies including power circuits, optimized control methods and advanced vector control algorithm for the motor. The drive is based on the newest IGBT devices to enhance reliability and efficiency. Easy of maintenance, safe operation, easy interface, and various options for communication with the process controller are among the major features offered to customer that reduce operation costs.

The MVD1000 series is a general-purpose drive that provides open-loop V/F motor control. It is a device widely used for motor control that requires high product integration and superior performance. MVD1000 is suitable for square torque applications such as fans, pumps and centrifugal compressors. It provides remarkable speed regulation operation and helps customers to increase productivity, reduce energy consumption and extend equipment operation lifetime.

The MVD2000 series delivers advanced motor vector control, including with and without encoder. It is suitable for constant torque applications such as crushers, extruders and conveyors.

The ability to decoupling motor flux and speed yields fast dynamic response to load fluctuations and high torque at low speeds, including at motor start-up. The drive achieves stable motor operation and accurate speed control so that it can be used for applications with higher requirements.

System appearance

More compact and
economical with easy
installation and maintenance

Exceptional Performance

Leading technology

- Multi-pulse phase-shifting rectification technology reduces grid current harmonic content effectively and meets IEEE 519- 1992
- Multi-level inverter technology supplies nearly sinusoidal motor voltages, eliminating output filter and making it suitable for long cable applications
- Advanced control functions enhance adaptability against instable grids. Advanced vector control technologies with and without speed sensors are used for higher motor control performance (MVD2000)
- Advanced auto tuning of motor parameters, DC braking, power loss ride through and seamless motor synchronous transfer from drive to grid and vice-versa (MVD2000)
- Coordination and control of multiple drives fulfill different application requirements (MVD2000)

Complete protection features

- Over-current protection
- Over-load protection
- Transformer high-temperature alarm and over-temperature protection
- Power cell over-temperature protection
- Under-voltage and over-voltage protection
- Motor protection via external signals
- Cooling fan abnormal alarm
- Cabinet door open protection
- Cabinet air pressure alarm
- Output short-circuit protection
- Input/output phase loss protection
- Communication failure protection
- Output grounding fault protection

Enhanced Process & Quality Control

- Power loss ride through and flying start features ensure a more uninterrupted operation in spite of temporary power loss
- Easily integrated with customer's upper level control system
- Additional protection against motor stall, reverse rotation direction, over- and under-speed contribute to operation safety (MVD2000)

Control and monitoring features

- Frequency command, operating frequency (Hz) (MVD1000)
- Speed command, operating speed (rpm) (MVD2000)
- Input/output power, current, voltage
- Accumulated running time
- MVD status
- Status of system bypass switches and user upstream switchgear
- Programmable analog I/Os
- Alarms and faults
- Event log

Lower cost of ownership

- System efficiency is higher than 98.5% (excluding phase-shift transformer), which decreases operating costs
- Optimized fan and pump operations ensure energy savings and shorten the investment payback time
- Easy to install, integrate in the user's process and easy to maintain
- Smooth speed control decreases mechanical stress, eliminates pipe-hammer effects and reduces maintenance costs
- Multilevel voltage output and starting current control reduce impacts on the motor
- Seamless motor transfer from MVD output to grid and vice-versa makes it possible to implement soft starter of single and multiple motors

Major Applications

Thermal power generation	Coal mill, induced draft fan, forced draft fan, primary air fan, desulfurization booster fan, condensation pump, feed water pump, circulation water pump
Metallurgy	Conveyor belt (with brake), gas compressor, dust removal fan, blast furnace blower, centrifugal feed pump, volumetric pump, phosphorus removal pump, boiler feed water pump
Mining	Crusher, grinding mill, conveyor belt (with brake), volumetric pump, ventilation fan, feed pump, drain pump
Petrochemical & gas	Compressor, volumetric pump, centrifugal pump, feed water pump, induced draft fan, main channel pump, oil pump, kiln head exhaust fan, submersible pump head/tail exhaust fan, dust removal fan, rotary kiln
Cement & building materials	Crusher, grinding mill, blender, extruder, drying furnace fan, hot temperature fan, raw mill fan, kiln head/tail exhaust fan, dust removal fan, rotary kiln
Sugar and ethanol	Cane sugar mill, water pump, induced draft fan
Rubber	Burner blower, feed water pump, dust collector, banbury mixer, extruder, conveyor belt (with brake)
Municipal engineering	Chiller, cooling tower, water supply pump, water intake pump, sewage pump, heat circulation pump, clean-up pump, aeration pump, clean water pump, air compressor

Energy Saving Case Study

Application: MVD retrofit for induced draft fan

Motor specifications		Fan specifications	
Rated power	710 kW	Shaft power	631 kW
Rated voltage	6600 V	Rated flow	144817 m ³ /hr
Rated frequency	60 Hz		
Pole number	6 pole		
Rated current	77.6 A		
Rated speed	1185 rpm		

	Damper air flow control	MVD air flow control
Air flow (m ³ /hr)	96,554	96,544
Motor speed (rpm)	1,185	592
Operating frequency (Hz)	60	35
Grid-side current (A)	44	20
Hourly power consumption (kW/hr)	402	183
Hourly energy saving (kW/hr)		219
Annual energy saving rate (%)		54%

MVD1000/MVD2000 Advantages

The MVD1000/MVD2000 series of medium voltage drives are convenient to operate and easy to maintain. It supports numerous communication interfaces commonly used by industry that can be easily integrated with peripheral control systems.

System cooling fans

- Effective air-cooling design
- Easy maintenance

Transformer cabinet

- The transformer secondary windings provide isolated phase-shifted power for improved input current waveforms and lower grid current harmonic distortion

Controller cabinet

- Touch screen display for system monitoring and parameter setting
- High performance DSP for reliable control
- Analog and digital signal I/Os for different types of applications
- UPS

Power cell cabinet

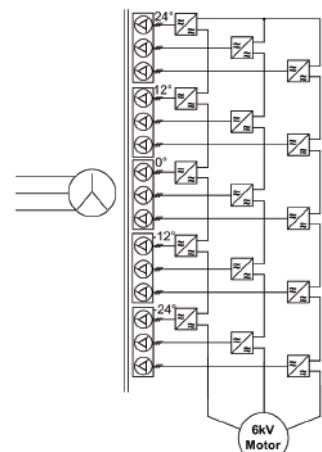

- Modular power cell allows easy replacement and maintenance
- Optical fiber between low voltage and high voltage sections

MVD1000/MVD2000 Topology

- Modular and flexible series-connected power cells achieve different multilevel working motor voltages
- Extremely low harmonic contents of motor and grid currents
- Fast transient response and a wide range of motor power
- N+1 power cell redundancy configuration (optional)

Drive series	Cells/Phase	Input rectification pulse
3.3 kV	3/4	18/24
4.16 kV	4/5	24/30
6 kV	5/6	30/36
6.6 kV	5/6	30/36
10 kV	8/9	48/54
11 kV	9/10	54/60

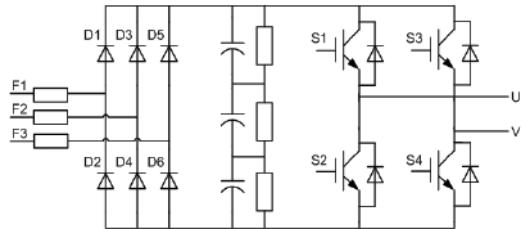

* Refer to the system model name description for other voltage levels.

Power Cell Topology

The power cell inputs are connected to 3-phase low voltage transformer secondary windings, while the outputs are connected in series to build up the required motor working voltage. A three-phase diode rectifier charges the DC link capacitor, which supplies the H-bridge single phase inverter circuit formed by four IGBTs.

The power cells receive the control signal through optical fiber to control the on/off states of IGBTs S1~S4 via PWM regulation. The resulting output of each power cell is a single phase pulse modulated waveform.

Power Cell Characteristics

- Optional power cell bypass ensures that any failed power cell can be bypassed to keep the system in operation until maintenance can be scheduled. This function increases the system availability effectively and reduces downtime.
- Modular design for effective reduction of installation and maintenance time.

Enhanced Input/Output Power Quality

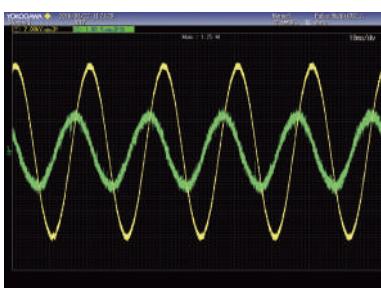

Meets IEEE-519 for input and output voltages and currents.

Input

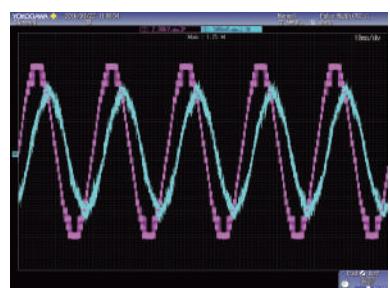

- The transformer efficiency is increased
- The grid voltage quality is not affected
- No extra input filter required

Output

- No extra output filter required
- No need for motor derating operation
- Low dv/dt interference, avoids damaging insulation of the motor and cables
- No torque ripple resulting from harmonics
- Suitable for long cable applications

Line input voltage (yellow) and current (green)

Output voltage (purple) and current (blue)

MVD1000/MVD2000 Series

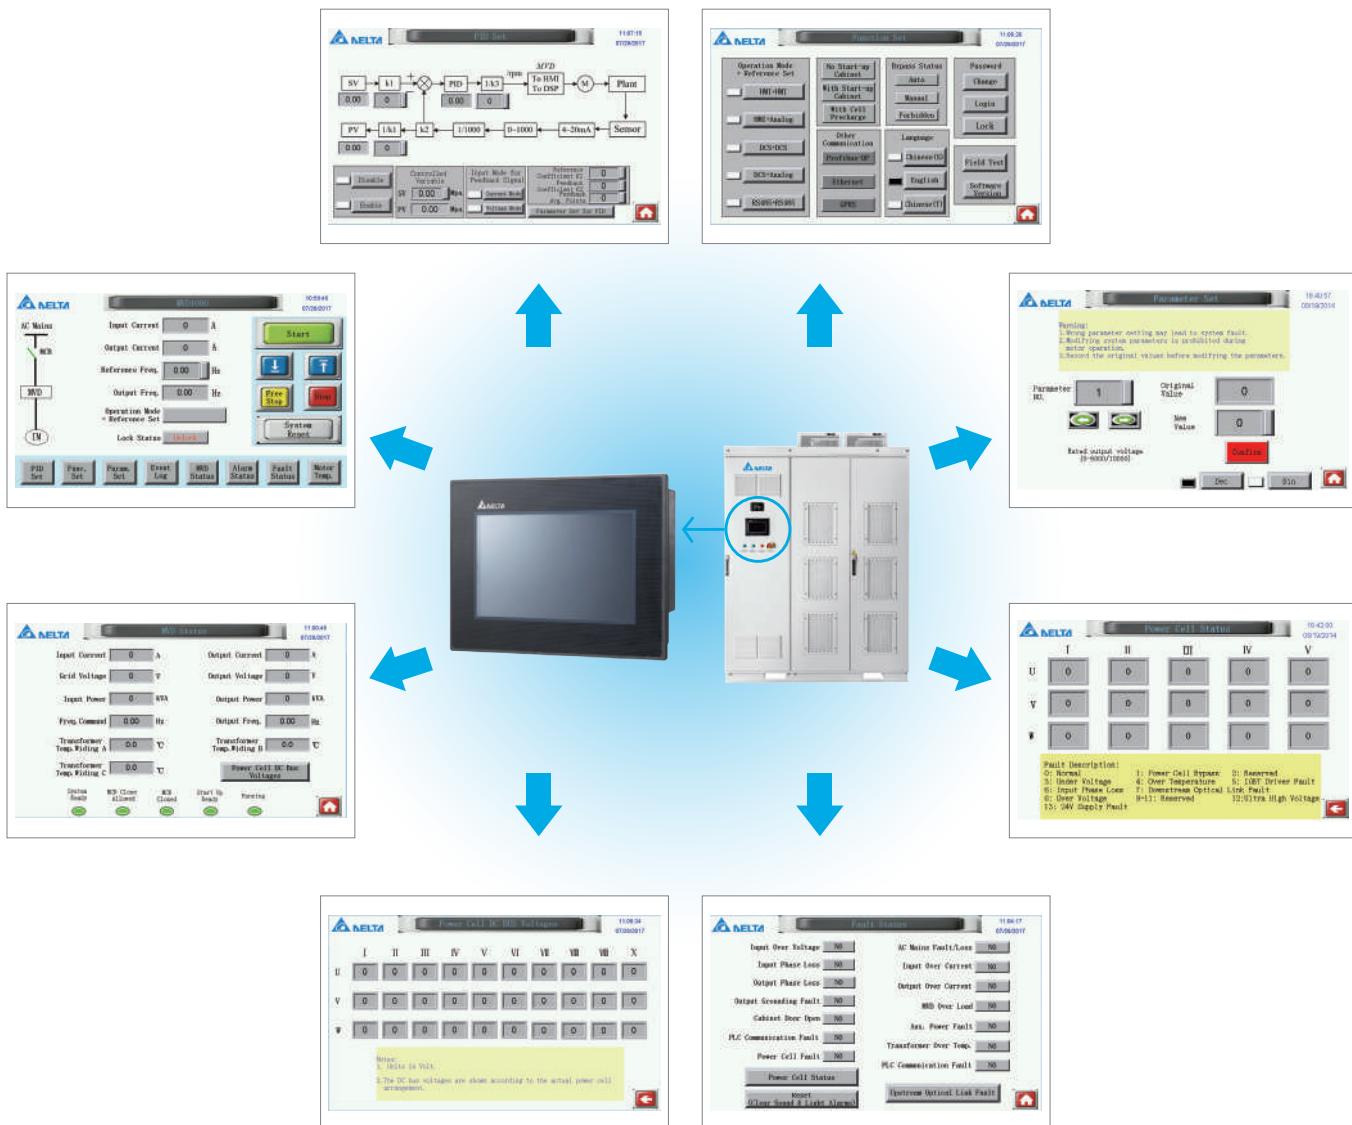

Specifications & Parameters

	MVD1000	MVD2000
Input frequency	50 Hz / 60 Hz (-5% ~ 5%)	
Control power	Single phase AC220 V; power capacity 5 kVA (Design upon customer request)	
Input current harmonics	<<5% (rated)	
Input voltage harmonics	<5% (rated)	
Input power factor	>0.96 (rated)	
System efficiency	>98.5% (rated, excluding transformer)	
Output voltage range	3.3 kV~11 kV (Refer to the system model name for other voltage levels.)	
Output frequency range	0~75 Hz	
Frequency resolution	0.01 Hz	
Overload capacity	120% for 1 min every 10 min; 150% stop immediately (Please contact Delta for other overload capacity requirements)	
Starting torque	Rated torque (torque boost function can be configured to increase starting torque)	Above 120% rated torque
Control methods	V/F open-loop control	Vector control with speed sensor; vector control without speed sensor
Speed control range	Not defined (open loop)	1%~100% (with speed sensor); 5%~100% (without speed sensor)
Speed control resolution (stable state)	N/A	±0.01% (with speed sensor, depending on speed sensor accuracy); ±0.5% (without speed sensor)
Speed response bandwidth	N/A	60 rad/s (with speed sensor); 20 rad/s (without speed sensor)
Current response bandwidth	N/A	600 rad/s
PID function	Built-in PID regulator available with programmable parameters	
Modulation method	SPWM/SVPWM	
Acceleration & deceleration time	0~3000 s (programmable)	
Alarms	Power cell under-voltage, analog signals loss, cooling fan over-temperature, cooling fan power supply failure, air flow over-pressure, air flow under-pressure, control power loss, transformer high-temperature, HMI communication failure, input under-voltage, UPS failure, PLC communication failure, flying start failure	
Protections	Over-current, over-load, short-circuit, over-voltage, phase loss, high-voltage input, output grounding fault, transformer over-temperature, power cell communication failure, high-voltage cabinet door open, control power fault, external fault, motor stall protection. Additional protection for MVD2000 include over-speed protection, under-speed protection, reverse rotation protection	
Control functions	Torque boost, multi-point V/F control, automatic output voltage regulation, frequency skipping, flying start, power loss ride through, automatic restart, soft stall, power cell bypass (optional), system bypass (optional), synchronous transfer switch (optional), fan redundancy (optional)	Speed skipping, flying start, power loss ride through, automatic restart, DC braking, jogging, S-curve acceleration and deceleration, auto tuning of motor parameters, power cell bypass (optional), system bypass (optional), synchronous transfer switch (optional), master-slave control (optional), fan redundancy (optional)
Analog inputs	0~10 V / 4~20 mA, 2 sets (expandable)	
Analog outputs	0~10 V / 4~20 mA, 4 sets (expandable)	
Digital I/Os	10 sets input, 8 sets output (expandable), dry contact type	
Human machine interface	7 inch Chinese/English touch-screen; larger sizes available	
Communication (optional)	Modbus RTU/ASCII (RS485), Modbus TCP/IP (Ethernet), Profibus-DP, DeviceNet, CANopen, GPRS	
Ambient temperature	-5 °C~40 °C (normal operation); 40 °C~50 °C (continuous running at derating speed)	
Storage/transportation temperature	-40 °C~70 °C	

Ambient humidity	5%~95%, no condensation
Altitude	< 1000 m, normal operation; 1000-2000 m, derating operation; > 2000 m, special design upon request
Cooling	Forced air cooling
Optional configuration	Space heater, surge arrester, fan redundancy, temperature module, input power meter
System bypass (optional)	Manual bypass, automatic bypass, synchronous transfer
Protection level	IP30 standard; IP42 optional
Standards and certifications	IEC, IEEE, GB, CE, GOST
Color	RAL7035 (Design upon customer request)

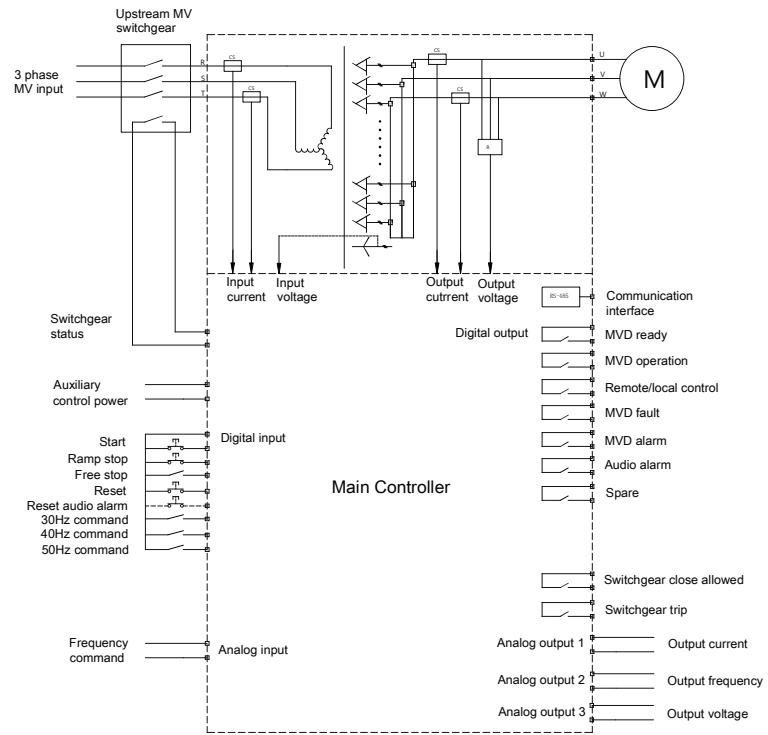

Human-Machine Interface

The HMI (Human-Machine Interface) is installed with a high resolution touch screen and is easy to operate. It can communicate through PLC to complete function parameter settings, display and record system status, operating status, error and so on. There is a password lock function in the user interface, which is only accessible to the authorized operator to ensure operation security.

Wiring Diagram

MVD I/O can be set according to customer request. The standard interface is as below:

Note: For motor power under 1600 kW, PF x Efficiency = 0.80, otherwise PF x Efficiency = 0.84.

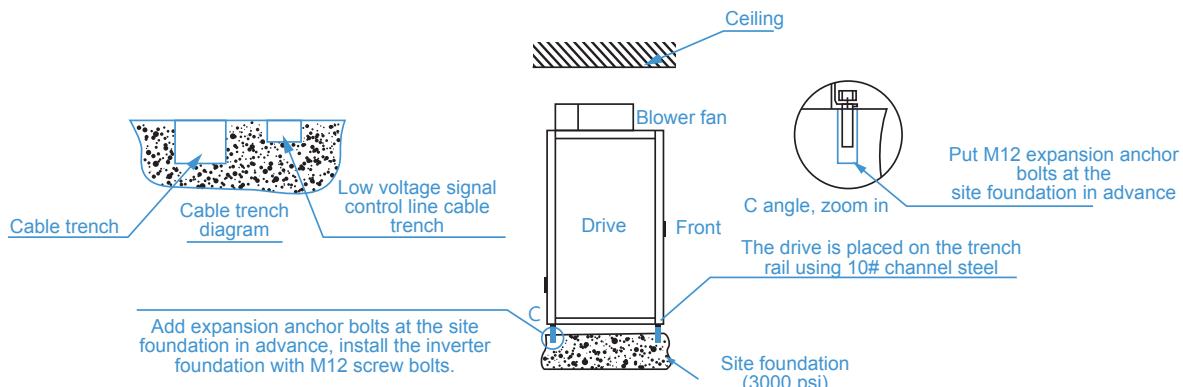

System Structure

It is recommended to reserve minimum space for MVD maintenance:

Installation Diagram

Installation Diagram

For wiring safety and convenience, it is recommended to install the MVD cabinet on a cable trench. It is not allowed to install on a flammable surface.

Detailed requirements :

1. It is recommended to set the minimum length of the cable trench as the total MVD length, adding 1 m to the left and right for easy cabling and maintenance.
2. The MVD is placed on the trench rail using 10# channel steel (use 16# channel steel if the MVD power is higher than 1600 kW and use 18# I beam steel when higher than 4000 kW).

Reliability and Certification

MVD1000/MVD2000 high reliability and quality programs are ensured through intense inspection and testing. To guarantee that the motor drive operates as predicted during commissioning, Delta Electronics has built an advanced and multi-megawatt testing facility for full load testing capability.
